

the Cutting Edge®
media evaluation software

The Cutting Edge v3.5

Server Edition

Cutting Edge Server Features

- **Multi-user**
- **High-performance server software**
- **Automated backups**
- **Cross-platform compatibility**
- **Automatic record locking**
- **Access to all Full Edition features**

The Cutting Edge Server Edition is high performance server software that efficiently delivers the Cutting Edge to up to 250 users. It is designed to run on a server rather than a desktop computer. It is more robust and faster than the peer-to-peer networking of the Network Edition.

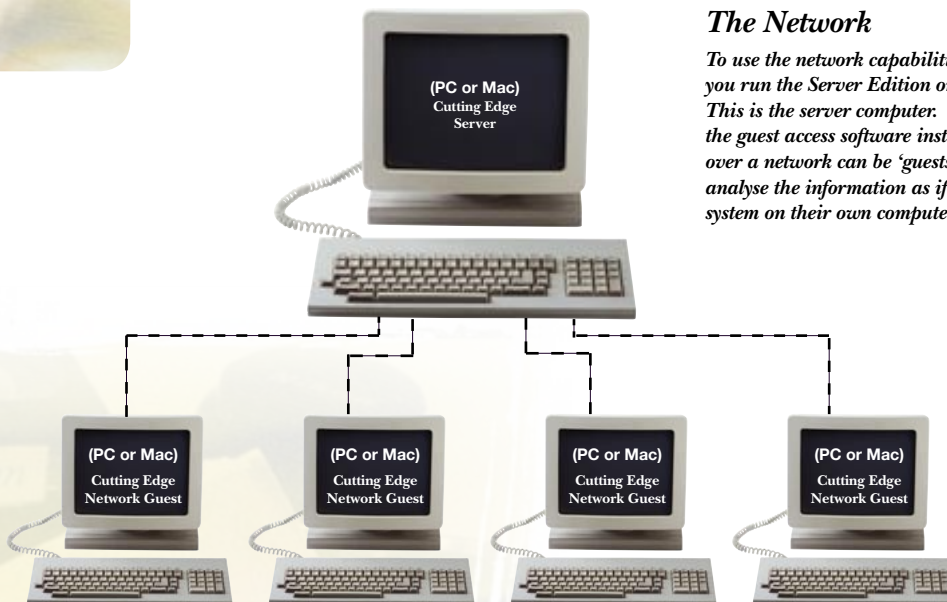

The stability and increased performance of server hardware and software means the Cutting Edge is much more reliable.

Additionally the Server Edition enables you to schedule automatic backups of the Cutting Edge. These can even run whilst users are accessing the system.

The Cutting Edge Full Edition is turned into a multi-user system. This enables you to share information seamlessly between computers over your network, even between Windows and Mac OS versions of the Cutting Edge.

Each additional user license allows another computer to access the system.

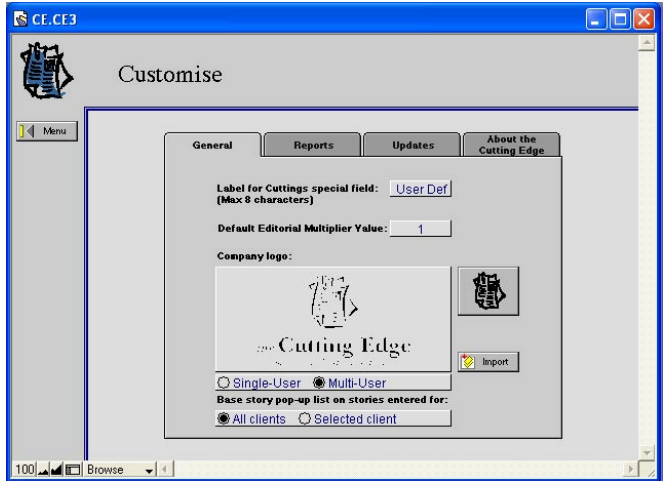

You can have some people entering cuttings details and others analysing the data, even at the same time. The system looks after the integrity of your data by preventing two people from changing the same information simultaneously.

The Network

To use the network capabilities of the Cutting Edge, you run the Server Edition on a central computer. This is the server computer. Other computers with the guest access software installed and connected over a network can be 'guests'. They can edit and analyse the information as if they had the full system on their own computer.

Features	Benefits
<i>Up to 250 simultaneous users</i>	Everyone has immediate access to the latest cutting information.
<i>Increased network performance</i>	The server is optimised for network access. Users will notice a speed improvement compared to the Network Edition.
<i>Automated unattended backups</i>	The server can be configured to automatically perform backups at regular intervals, even whilst users are connected.
<i>Automatic record locking</i>	Maintains the integrity of your data by preventing two people from changing the same information at the same time.
<i>Cross-platform compatibility</i>	Allows Windows and Mac OS computers connected to the same network to share the Cutting Edge.
<i>Access all Full Edition features</i>	Allows each member of the team to work as if they have the Full Edition on their computer.

The Cutting Edge Full Edition can be turned into multi-user mode with a click of a button

The Cutting Edge Range

Cutting Edge Lite
 The ideal starter package. A single-user system that gives you a sound evaluation of your media coverage but without the in-depth analyses of the Full Edition.

The Cutting Edge Full Edition
 Sophisticated analyses of your media coverage. All the features of Cutting Edge Lite plus many more analyses & other power features.

Cutting Edge Network Edition
 Peer-to-peer networking to allow up to 10 users to access the Cutting Edge simultaneously.

Cutting Edge Server Edition
 Robust client-server networking allowing up to 250 simultaneous users and automated backups.

- FOR WINDOWS**
- Minimum Requirements**
- Intel compatible Pentium 133 or higher
 - 128Mb RAM
 - Hard disk drive
 - Windows XP Pro, Server 2000, Server 2003
 - CD-ROM drive to install the software
 - Microsoft TCP/IP or IPX/SPX network
 - Client computers have the same requirements as the Full Edition

- FOR MACINTOSH OS**
- Minimum Requirements**
- Power Macintosh computer or higher (G3 or higher for OS X)
 - Mac OS 8.6 through 9.2.2 or OS X 10.1 or higher
 - 32 Mb RAM (128 Mb for OS X)
 - Hard disk drive
 - CD-ROM drive to install the software
 - TCP/IP network (OS X / Mac OS) or AppleTalk network (Mac OS only)
 - Client computers have the same requirements as the Full Edition
